

Application Type: Organics Management Grant**Grant Amount:****Contract End Date:**

Purpose and Overview

Overview

The goal of the Solid Waste Management Act of 1991 (T.C.A. §68-211-825) is to reduce the amount of solid waste disposed of at Class I disposal facilities by twenty-five percent (25%). The largest percentage of the municipal solid waste stream is organic material; at an estimated 30% of the waste stream. Strategies for reducing organic waste includes source reduction, wasted food recovery, and food donation, food diversion (which includes feeding animals, anaerobic digestion, and composting), or by being put towards beneficial end-use. The purpose of this grant is to offer support to the entire spectrum of organics management, meaning this offering is not limited to composting. This grant covers organics management for education, waste food recovery, food donation, and diversion infrastructure. All methods of organics management support the 2015-2025 Solid Waste and Materials Management Plan's implementation.

In 2015, TDEC initiated the first ever organics management related grant the State had offered, which specifically targeted composting. The composting grant aimed to promote increased composting access across the state through cooperative partnerships among solid waste planning regions, counties, and municipalities. These partnerships define activities that can be undertaken to reduce operation costs, promote recycling, and increase revenues for local governments participating in these cooperative partnerships. As solid waste generation, diversion, and disposal evolve, TDEC makes every effort to adapt its grant opportunities so that assistance can be provided to Tennessee communities, organizations, and businesses to further promote reductions in solid waste generation and disposal.

The FY26 Organics Management Grant places emphasis on Four (4) priorities:

- Fostering public/private partnerships.
- Counties, municipalities, public institutions, or non-profit organizations providing new or expanded organics management services to their region.
- Pursuing reductions in wasted food and food waste through education, food recovery and donation, feeding animals, industrial uses, anaerobic digestion, composting, or other means deemed likely to significantly reduce, recover, and/or divert food waste.
- 13 counties and municipalities located within the Major Disaster Declaration for Hurricane Helene.

TDEC acknowledges that not all local jurisdictions are the same and they may wish to take different approaches toward achieving the state's solid waste reduction and diversion goals. Regions with smaller populations may focus efforts toward achieving qualitative goals rather than quantitative goals of the more populous regions and the state. Qualitative goals include expanding the types of materials collected, providing a service to an underserved area, improving efficiencies, and improving quality of material recovered. Quantitative goals include increased recovery rates, capture rates, participation rates, set-out rates, or decreased costs per household served.

Purpose of the Grant

The Organics Management Grant supports the implementation of the [2015-2025 Solid Waste and Materials Management Plan](#) objectives. With this grant, it is TDEC's intent to support efforts towards achieving waste reduction and recycling goals for the state. Successful applications will demonstrate how the proposed project will:

- Increase tonnages of organic materials collected (Objective 1)
- Increase organics recycling access and/or participation (Objective 2)
- Promote organics material processing and end use in Tennessee (Objective 3)
- Increase diversion of organics (Objective 4)
- Support new organics waste reduction and recycling technologies (Objective 5)
- Improve organics education and outreach (Objective 6)

TDEC Sustainability Statement

The Tennessee Department of Environment and Conservation (TDEC) acknowledges that the products and services we procure have fundamental human health, environmental, and economic impacts, and that purchasing decisions should exemplify our commitment to sustainability and to protecting the environment and the quality of life of Tennesseans. TDEC endeavors to reduce the environmental impacts of its operations and to promote fiscal responsibility and community and environmental stewardship by integrating sustainability considerations in sourcing processes while continuing to observe general state purchasing laws and procurement policies.

Timeline, Eligibility & Funding

Deadline to Submit

A complete application shall be submitted in the Grants Management System (GMS) online on or before April 11, 2025, by 4:30 p.m. CST. Applications received after this date and time will be automatically declined. Applications submitted via email or physical mail will be declined without review.

A complete application consists of a digital signature of the head of the organization and clear and detailed completion of all application prompts in GMS, including but not limited to the Narrative Questions, Budget Worksheet, verification of having recently completed the Title VI Pre-Audit Survey (NOTE: this is not the Title VI Training Certification), non-debarment verification, and more.

Grant Timeline

The anticipated timeline for this grant offering is as follows:

- February 28, 2025: Request for applications announced
- April 18, 2025: Deadline for application submittal
- May 19, 2025: Announce awards

- July 31, 2025: Contract Start Date
- October 15, 2025: Grantee submits subcontract request or bid package
- March 15, 2026: Equipment/materials shall be installed/made operational
- June 15, 2026: Final Request for Grant Reimbursements Submitted
- July 31, 2028: Contract End Date for equipment without "Vested Interest"
- July 31, 2030: Contract End Date for equipment with "Vested Interest"

Eligibility

All Tennessee counties, municipalities, and organizations which have been determined to be tax-exempt nonprofit recycling organizations who are designated as 501(c)(3) by the Internal Revenue Service may apply for grants under T.C.A. § 68-211-825.

As stated in the overview, priority for the Organics Management Grant will be given to entities that demonstrate a public/private partnership. Priority will be given to counties, municipalities, public institutions, and non-profit organizations that provide new or expanded organics management services to residents. Also, consideration will be given to applicants addressing wasted food and food waste through education, feeding people, feeding animals, industrial uses, anaerobic digestion, and composting.

Government and non-profit applicants may not request equipment that is otherwise available at privately owned facilities which serve the relevant geographical area. If an applicant demonstrates that the equipment is an indispensable component of a project and will not compete with privately owned facilities, it may be considered for funding. Equipment that causes the applicant to directly compete with existing private enterprises in the applicant's geographical area (T.C.A. §68-211-825(a)) is not eligible under this grant.

Applicants previously awarded grants from the Solid Waste Management Fund in the last two years that are under contract with open balances or who have failed to meet the obligations of those contracts are ineligible. In addition, projects that require land will need to demonstrate that the necessary land is secured for the project prior to final execution of the grant contract. Projects must be ready to start upon grant contract execution.

Equipment and/or items eligible for funding should fall into three categories:

1. Organics waste reduction equipment or items, which may include educational materials, or similar equipment;
2. Organics waste recovery and donation equipment or items, which may include bins in food service retail establishments designed to collect unconsumed fruits and vegetables, equipment that may support existing food recovery or donation operations, or similar activities;
3. Organics waste diversion equipment or items, which may include equipment necessary for general organics processing, for composting operations, or similar activities.

Any strategy that aids in the increased disposal of materials in Class I disposal facilities is not eligible under the terms of the grant.

Funding

The Organics Management Grant supports the implementation of 2015-2025 Solid Waste and Materials Management Plan Objectives which can be reviewed at the following link: [Solid Waste 2025 Plan](#).

It is the Department's intent with this grant to support efforts of local governments toward achieving their waste reduction and recycling goals. Successful proposals will demonstrate how the requested services or equipment will improve operating efficiencies or:

- Increase tonnages of organic materials collected (Objective 1)
- Increase organics recycling access and/or participation (Objective 2)
- Promote organics material processing and end use in Tennessee (Objective 3)
- Increase diversion of organics (Objective 4)
- Support new organics waste reduction and recycling technologies (Objective 5)
- Improve organics education and outreach (Objective 6)

The total allocation grant funding for this Organics Management grant is \$400,000 will be for municipalities, counties, and non-profits. Their maximum \$150,000.

A local match of 10%-50% (Attachment 2) is required based on an economic index that includes factors such as per capita income and property values in the jurisdiction to be served. Tenn. Code Ann. § 68-211-825(a).

Grant awards will be made based on the estimates included in the grant application and will not be increased. It is important that applicants research the equipment they are seeking to purchase and obtain accurate price information prior to submitting their application. Only equipment or facility improvements identified in the application and awarded will be funded, and purchase and installation deadlines will be detailed in the contract scopes. In the event of a delay in receiving equipment or materials, contact should immediately be made with the Grants Program Manager and a justification letter and estimated timeline should be submitted for approval.

Selection Criteria

Selection Criteria :

Applications will first be reviewed for completeness and eligibility. Applications shall be rated first based on project description, value, benefits, sustainability, and operational priorities averaged among ratings completed by a minimum of three (3) anonymous raters. Finally, the applications will be assigned up to five (5) modifiers. The first and second modifiers will correspond to the applicant's county economic classification in the Appalachian Regional Commission (ARC) economic index. The next possible modifier will be assigned if the applicant has received the same type of grant to which they are currently applying in the last three (3) years. Next, has the applicant had prior history of delays, inefficiency in administrative activities, or terminated for cause. Lastly, a modifier will be assigned for the applicant proposing project partnerships with local municipality/county with interlocal agreements and/or private partnership subcontracts.

The following modifiers shall be applied to an application:

Modifier	Points
At-Risk County	+5
Distressed County	+10
Received Same Grant Type in Past 3 Years	-10
Past 3-Year History of Delays and/or Failure for Cause	-10
Partnerships with Local Municipalities/County Government by Interlocal Agreements and/or Subcontracting with Private Partnership(s)	+5
No Utilization of Tennessee-based Landfill	-5

Title VI Compliance

The Title VI Compliance Application is a separate application that is completed by the applicant to provide your organizations Pre-Audit Survey responses. Please note, this is not ONLY the Title VI Training and Certification.

This application will only need to be completed once per year when you wish to receive funds. Also, this application will automatically go back into Draft Status to be resubmitted 9 months after it has been marked complete.

TDEC TITLE VI STATEMENT

All Grantees will be required to affirm the following statement as part of the grant contract: The Grantee hereby agrees, warrants, and assures that no person shall be excluded from participation in, be denied benefits of, or be otherwise subjected to discrimination in the performance of this Grant Contract or in the employment practices of the Grantee on the grounds of disability, age, race, color, religion, sex, national origin, or any other classification protected by Federal, Tennessee State constitutional, or statutory law. The Grantee shall, upon request, show proof of such nondiscrimination and shall post in conspicuous places, available to all employees and applicants, notices of nondiscrimination.

Please confirm that the Applicant Organization has completed the Title VI Compliance application within the last calendar year.

Yes

Specify completion date of most recent Title VI application.

Narrative Questions

A. Project Description (40 Points)

1. Does the project compete with private services or duplicate existing public sector services provided within the municipal solid waste planning region?

If other such facilities or programs currently exist in the region, justify your proposed project or program.

No

Further_Explanation_to_Question_1.pdf

111.3 KB - 04/11/2025 11:52 AM

Total Files: 1

2. Describe the proposed program or project; provide details and attachments as necessary. In the description, be sure to define the addressed need for the program or project, and if the project has a place within the region's municipal solid waste plan. If other such facilities or programs currently exist in the region, justify your proposed project or program.

Provide details and attachments as necessary.

The Knoxville Compost Project began as a pilot project in February 2022 with a single public food scraps drop-off in our downtown "Old City" area. Food scraps from this drop-off were then transported to a local farm, BattleField Farm, to be turned into compost and used on their many garden beds to grow nutrient-rich produce for underserved areas of our community. The program was very well received, thus allowing for the expansion of four additional food scrap drop-off locations throughout Knoxville. Currently, we have a food scraps drop-off at three of our recycling drop-off centers (east, south, and northwest Knoxville), at every Wednesday and Saturday Market Square Farmers' Market downtown (both winter and summer markets), and at a community garden in our downtown "Old City" area. With the expansion of our drop-offs, we also added two more local farms, Beardsley Farm & Pastor Richard S. Brown Jr. Community Farm, to our rotation for on-site composting using these food scraps from the drop-off locations. The partner farms use the finished compost on site as part of their food security programming.

Furthermore, in April 2023 we held our first backyard composting workshop and hosted eight additional workshops over the next 2 years. In addition to providing composting knowledge, these workshops provided 280 Knoxville households with a backyard compost tumbler and countertop food scrap collection bin to be able to start composting right away. All of this was offered to the public at no cost. Additionally, the backyard composting workshops were so popular (with registration filling up within minutes of going live) that we have come to find just how desired of a resource these workshops have been. We are consistently asked when the next workshop will be held.

It is one of the City of Knoxville's goals to reduce the amount of organic material going to the landfill, ultimately reducing the harmful production of methane emissions while also preserving necessary space in the nearby landfills. The amount of food scraps diverted from the landfill has increased year after year since the program began. We want to divert even more food waste from going to the landfill.

With grant funding, we want to partner with local businesses and organizations to host additional drop-off locations, making it even more convenient for the public to participate in the food scraps program. The added capacity and convenience of these additional drop-off locations will allow us to capture even more food waste from going to a landfill. This funding will enable us to fulfill these ongoing requests for composting education as well as provide the tools necessary for the public to compost in their own backyards.

It is important to us that we offer these resources to our community at no cost so there is no burden or barrier to keeping food scraps from going to a landfill. This grant funding will allow us to provide these free resources to Knoxville residents while giving us the opportunity to plan and grow the program as a permanent resource moving forward.

As mentioned in question 1, The Knoxville Compost Project and Green Heron Compost Services are not repeating the same services, but rather adding necessary capacity to get even more food waste out of the landfill.

3. Describe how the program/project will be promoted in the community to support the achievement of the goal specified in question 2.

Include all attachments of examples of promotional materials and projected timeline of implementation or distribution.

The Knoxville Compost Project is heavily promoted through the City of Knoxville's website (KnoxvilleTN.gov/Compost) and social media outlets (Facebook, Instagram, & X), through our partner farms & community organizations' own social media and programming, and through our office's attendance at many community events and presenting opportunities. The workshops have been especially promoted by word of mouth by those who have attended. Additionally, our office includes a promotional flyer in every mailer we send out to our residents who request a recycling cart (~1,200 new requests a year). We have also created educational content that is shared at any tabling event we attend, at the info booth at every Market Square Farmers' Market, and through appropriate community partners such as the Knox County Agriculture Extension office (and Master Gardeners program), Ijams Nature Center, and Knoxfill (a local refillery). The local news has also had at least three stories on The Knoxville Compost Project since it began. The promotion of this program is ongoing. For each backyard compost workshop, we will create an Eventbrite page for workshop registration as well as a social media graphic with details on the workshop and the timeline for when registration will go live. The graphic highlighting the workshop will also be posted to our website at KnoxvilleTN.gov/Compost. All workshops are advertised on social media 2 weeks ahead of the workshop date.

4. Is this request to replace older-existing items or equipment, or is this request adding a new service, facility improvement or piece of equipment? Outline a maintenance plan and/or include the proposed maintenance schedule for materials and/or equipment that are being requested. If this request is for educational or outreach efforts, please provide schedule of proposed educational opportunities, including topics, location, and target audiences.

If this request is for educational or outreach efforts, please provide schedule of proposed educational opportunities, including topics, location, and target audiences.

This request for grant funding is to help cover the cost of the following:

- Supplies to install additional food scrap drop-off locations (32-gallon carts, message boards, locks for carts)
- Backyard compost bins and countertop food scrap collection bins for distribution at our workshops attended by Knoxville households interested in composting at home
- The hauling of food scraps from drop-off locations to the three partner farms
- Maintenance of compost piles at our 3 partner farms
- Compensation for those who lead the City-sponsored backyard composting workshops
- Printing and distribution of educational content that promotes The Knoxville Compost Project and the importance of preventing food waste from being landfilled

Our office as well as our hauler, Green Heron, stay on top of the maintenance of all food scrap drop-off sites. Maintenance of these locations is minimal, consisting of the upkeep of any cart stickers that may need to be replaced, fixing locks that may be broken or require WD-40, cleaning dirt/bugs off the message boards, and always swapping out a food scraps collection cart with a clean cart at each scheduled pickup. Additionally, our office routinely checks on our cart and sticker inventory, placing orders for each when necessary.

Our general educational outreach promoting The Knoxville Compost Project as well as the importance and impact of reducing food waste is ongoing, as outlined in question 3. Our office accepts every opportunity to table at events and provide presentations when asked—this typically works out to be about 12 or so requests a year. These events span audiences from school-age children, to neighborhood groups, to rotary clubs, general public events, and even religious organizations. Concerning our backyard composting workshops, we will have a minimum of one workshop per quarter for a total of four a year. We will rotate locations for these workshops between different community spaces across the city such as Ijams Nature Center, Beardsley Community Farm, and the City's Public Works Complex. The workshops will cover the importance of composting, how to get started composting at home, and any troubleshooting tips. Our audiences for these workshops are households located within the City limits of Knoxville. Each workshop will have the capacity for at least thirty households for an estimated 120 households taught per year. Each household will leave the workshop with a free backyard compost bin and countertop food scraps collection bin.

B. Program Benefits (25 Points)

5. What improvements will this project bring to your current program (increased reduction through education, cost benefits, increased collection volume, avoided landfill costs, improved material quality)? What are the estimated benefits (increased collection volume, reduction levels, cost savings, etc.) associated with your project? How will you define, measure and quantify your success toward achieving the project goal?

This funding will allow us to expand the number and the convenience of our public food scrap drop-off locations, thus diverting more food scraps away from the landfill. Additionally, these expanded locations will engage community partners who will then be able to help advertise this program through their own social media accounts and programming. The goal is to have convenient locations where people can utilize the food scrap drop-offs as they run other errands or visit popular destinations. For example, on their way to a local grocery store/market or as they visit a park or recreation center. Through these expansions, we will better meet people where they are at and expect to capture even more food waste to be composted. Increasing the amount of food scraps will in turn generate more compost that our three partner farms are able to use on their own garden beds, providing nutrient-rich produce for underserved areas of our community. The backyard composting workshops will provide the knowledge and tools for the public to start composting at home, reducing their contribution to a landfill, and reaping the benefits of using their finished compost on their own gardens and yards.

We will define our success by the increased amount of food scraps collected year after year, the number of people who participate in both the drop-off program and in our workshops, and by the amount of finished compost generated. We will continue to measure the success of the program by recording the weight of both the collected food scraps and finished compost generated from those scraps, the number of people who participate in our drop-off program, and the number of participants at each of our workshops. Quantifying this success will include both the cost and methane emissions avoidance by diverting food scraps from the landfill.

6. Prepare a narrative that describes this project's outcomes and how these outcomes align with the following 2025 Plan Objectives:

- Increased material tonnage (Objective 1)
- Increased recycling access and/or participation (Objective 2)
- Promotion of material processing and end use in Tennessee (Objective 3)
- Increased diversion of organics (Objective 4)
- New waste reduction and recycling technology (Objective 5)
- Improved education and outreach (Objective 6)

Increased material tonnage (Objective 1)

• Through our partnership with Green Heron Compost Services, we are keeping record of the weight (lbs) of food scraps collected from each site at every scheduled collection. This information is recorded in a shared Google spreadsheet. In doing so, we not only see how our program is growing year after year, but we can also measure the food scrap drop-off locations that may need additional collections to keep up with

demand or require more amplification due to lower usage. Additionally, each of the three partner farms report each time they utilize the finished compost on their garden beds, providing approximate weight (lbs). We intend to continue measuring the growth of our program through these same methods. With the added capacity of additional drop-off locations as well as continuing our backyard compost workshops, we can expect a substantial increase for compost generated at our three partner farms and at the homes of Knoxville households who attend our workshops. Additionally, in order for the public to utilize our food scrap drop-off locations, they are required to take a one-time quiz, ensuring they know what they can and cannot compost through our program, to get the combination to unlock the carts at any of the drop-off locations. When they take this one-time quiz, we are capturing their email addresses. This enables us to measure how many community members are utilizing this program and gives us the opportunity to share information with them concerning new drop-off locations, upcoming backyard compost workshops, and any other composting initiatives.

Increased recycling access and/or participation (Objective 2)

- The City of Knoxville's request for this grant funding is to increase the access and participation of "recycling" food waste into compost. While our program does not align with this objective in terms of traditional mechanical recycling (paper, plastics, etc.), it is a form of turning something that is discarded into a new product, giving that product a new life. The City of Knoxville has a well-established traditional recycling program, providing 60,000 eligible households with access to curbside recycling as well as four recycling drop-off centers. However, Knoxville residents want even more ways to get good materials out of their trash carts—this is where The Knoxville Compost Project comes into play. Our funding request is specifically addressing this objective in that the funding will be used to expand access and therefore increase participation in the process of turning something originally destined for the landfill into a valuable resource instead.

Promotion of material processing and end use in Tennessee (Objective 3)

- The Knoxville Compost Project is as local as it gets. Food waste generated in the homes and businesses of Knoxville citizens is dropped off at various locations where community members often frequent such as a recycling drop-off center, a community garden, the farmers' market, and then that material is hauled to one of three local farms where it is made into compost. The compost generated at those farms is then used to grow nutrient-rich produce, which is then provided at no cost to the underserved areas of our community. Up until this program began in 2022, Knoxville citizens only had the option of discarding their food scraps in their garbage, which only fed the nearby landfill. In alignment with this objective, the highest and best use for this particular by-product would be to nourish Knoxville neighbors with high quality fruits and vegetables that are produced from this generated compost—and it all remains here in Knoxville, TN.

Increased diversion of organics (Objective 4)

- The entire goal of this funding request is in alignment with objective 4. The Knoxville Compost Project exists to increase the diversion of organics. Not only does this program provide access to composting for those who may not have the space, time, or desire to compost in their own backyards but it also supports those who do have the capacity to compost at home. While The Knoxville Compost Project has already been established, it is our goal to get even more organic material out of the landfill by adding additional, convenient public food scrap drop-off locations as well as continuing to offer free backyard compost

workshops to Knoxville households. The funding will also enable us to continue educational efforts on the importance of food waste reduction and the composting resources available to our community members. The added capacity provided by this funding will substantially increase the diversion of food waste from the landfill.

New waste reduction and recycling technology (Objective 5)

- While the technology of this program is nothing new, it is worth mentioning that the three partner farms host a composting system that is not necessarily a traditional system. Through a partnership with City Possum Farm, the composters built at these farms are aerated static pile (ASP) composters. They consist of three large, covered bins where two of the bins have PVC pipes in the bottom with holes throughout that blow air for one minute every hour. The blown air is powered by solar panels on the roof of the composters. The ASP method allows the food scraps to be composted faster, with minimal pile turning required by staff. This reduces odors and labor costs while more quickly generating finished compost to be used on the garden beds.

Improved education and outreach (Objective 6)

- As part of this funding request, our office seeks to not only create and distribute additional educational content as described in question 3 but to also increase our outreach efforts by engaging with more community partners. The expansion of the food scrap drop-off sites will involve community organizations both hosting a drop-off at their location as well as promoting The Knoxville Compost Project through their own educational outreach and programming. This will help The Knoxville Compost Project to reach a greater audience. Additionally, the backyard compost workshops will provide in-depth education on how to get composting in your own backyard. These workshops will provide educational handouts as well as the tools to start right away. We will continue to collaborate with the Knox County Agriculture Extension Office's Master Gardener Program to offer the Compost Hotline; a resource for any composting questions the public may have. Lastly, this funding will enable us to continue our partnership with Nourish Knoxville, who in addition to hosting a food scraps drop-off at every Wednesday and Saturday farmers' market, will provide education and engagement promoting composting in Knoxville at their information booth.

C. Program Sustainability (25 Points)

7. Describe project's current efforts to ensure long term financial viability such as the use of profit sharing, processing or collection fees, enterprise fund accounting, market agreements, or other considerations to insure its long term sustainability.

Once the drop-off locations are established, the only ongoing cost is the monthly payments to the contractor for the hauling of those food scraps to our partner farms and their maintenance of the compost piles. Other than the cost of the material, there is no cost to establish a drop-off at any of the chosen locations. For example, the locations are either at City-owned properties or with partner organizations who have agreed to host a drop-off with the understanding that our office will work directly with the contractor to maintain the locations. We will not establish more drop-off locations than we can financially maintain. The workshops will host an amount of attendees that we can afford enough composters/food scrap bins for (30 households per workshop) and we will only host as many workshops as the funding of those containers can sustain (a minimum of one per quarter). We will consistently compare costs of composters/food scrap bins to ensure we are purchasing the most affordable and durable containers available to us. Additionally, we will enter into agreements that guarantee a fixed price for services provided. These agreements will allow us to budget accordingly.

8. Provide a copy of any partnership agreements, funding agreements, feedstock specifications or operational requirements that are to be used to maintain the long term sustainability of the project?

9. Describe the process for marketing these recovered commodities (sole contracts, spot markets, where they are marketed, etc.). Is there a direct or local end-use market for the finished product of this project? Are the markets local, within the state of Tennessee or outside the State?

The beauty in this project is how local its mission is. The food scraps collected from our public drop-off locations are transported to three local farms to be turned into compost and used on their garden beds. Each of these three farms does important work in the Knoxville community to get fresh, nutrient-rich produce to disadvantaged individuals such as our elderly, impoverished, or refugee populations. Our backyard compost workshops are offered to households within the city limits of Knoxville, returning the food waste that is generated at local households back to the land and gardens of those same local residents.

10. How will this project's revenue funds be used or reinvested to perpetuate the proposed project into the future? What other funds are planned to be used to support the project and how?

Revenue will not be generated from this program, as we will offer these resources to our community at no cost. The budget for the future of this program will be covered under the public service department's operational budget.

11. Is the local match and additional local share included in the applicable agency budget?

If yes, provide a copy of the budget.

If no, provide an approved resolution for budget expansion.

Yes

Provide a copy of the existing operating budget.

13. Is the project application for a county, municipality, public institution, or non-profit organization to improve the management of organic materials in their jurisdiction?

Yes. Currently the City of Knoxville has a strong yard waste collection program where leaves and brush are picked up from eligible households then repurposed into mulch at Living Earth, a contracted mulching company. However, we had not previously had an outlet for the public to dispose of their food waste other than just throwing it in the garbage. By providing an outlet for the public to compost their organic material instead, Knoxville now has an option for managing food waste; the requested funds will grow the convenience of this option. Not only will keeping this food waste out of the landfills expand the life of those necessary landfills, it will provide the public with an additional option to dispose of food waste that may better suit their preferences. The expansion of The Knoxville Compost Project is a method for improving the management of organic materials.

14. Describe how this project will contribute to the long-term reduction of organic materials that would have been destined for disposal but will be redirected to higher uses such as feeding the food insecure, animal feed, anaerobic digestion, or compost operations?

Please upload any Regional maps, including service area, solid waste and recycling collection/processing sites, composting sites, project location, etc.

The Knoxville Compost Project works with three local farms: BattleField Farm, Beardsley Farm, and Pastor Richard S. Brown Jr. Community Farm. The City previously built large, three-bin ASP composters on each of these farms to accommodate the food waste from our public food scrap drop-off locations. The finished compost that is generated at each of these farms is then used on their many garden beds to provide nutrient-rich produce that feeds the underserved areas of Knoxville. You will find details of the food security programming that each of these farms do in the letters of support attached to this grant application. These three farms are vital to our community, getting high quality produce to those who cannot consistently afford fresh produce, those who are elderly, and to those who are seeking refuge within our community. Furthermore, each of these farms provide workforce development and hands-on experience with growing a garden in their own backyard.

The backyard composting workshops are an incredible resource to the community as they not only teach residents how to compost but they also provide the tools necessary to get started composting right away. We receive calls all the time from residents looking for compost for their own veggie and flower gardens. These workshops allow those residents the opportunity to create their own compost from their own food scraps right at home, with access to a compost hotline (through our partnership with the Knox County Ag Extension Office) to help troubleshoot along the way.

Grant Terms and Conditions

Applicants selected for grant funds must follow all terms and conditions within the grant contract. Awardees will be expected to submit or maintain for inspection during normal hours operational data relative to daily operations, to include but not limited to weights, feed stocks utilized, temperatures, residual disposal or diversion, marketing, and project maintenance logs.

If non-profits that support or benefit State agencies seek to apply, all necessary State approvals, transfer of ownership documents, storage approvals, inventory control, and etc. must be included in the grant application for consideration.

Prior to any funds being released, a grant project management conference must be conducted with Division Program staff and the grantee, to review the terms and conditions of the grant contract, including the bid process and reimbursement.

The Grantee shall submit details, project plans, and specifications on all proposed new sites and their activities within 60 days of receiving the executed contract for approval by Division Program staff. Proof of application for all permits may be required in some situations. Local funding for costs in excess of the grant award shall be approved and available upon receipt of a fully executed grant to avoid unnecessary delays. All projects must be ready to begin upon receipt of an executed contract.

The local match shall be determined by the Department, using an economic index based upon the Four Tiers of an Integrated Solid Waste Management System, found in Table VI-1 of the 2025 Plan (pages 144-149). The Organics Management Grant Match Requirement Table in Attachment 4 of this manual provides information designating into which tier each county falls. You can view the 2025 Plan for your reference.

If funded, private for-profit applicant projects will have a 50% financial match regardless of county of operation. For-profit applicants, if funded, will have to meet all requirements contained in the cost-reimbursement grant contract.

Reimbursement may not exceed 50% of the approved total eligible project costs.

- Matching funds are required at the time of grant reimbursement.
- In-kind or force account contributions will not be considered.

It is important that applicants research the equipment needed to submit accurate price quotes and delivery periods with their application. Maintenance, delivery, and shipping amounts will need to be detailed and included in the application. The total allocation of grant funding for this Organics Management Grant is \$400,000. Municipalities, counties, and non-profits can apply for a Maximum State Liability of \$150,000. This does not include the Grantee match portion.

The Department's intent with this grant offer is to also promote environmentally preferable purchasing in support of the 2025 Solid Waste and Materials Management Plan Objective 3 by requiring equipment purchased by this grant offer to be made with recycled content, when available.

Additional comments regarding the budget:

We have already secured enough compost bins to host 4 workshops a year which is why this cost is not included in the budget.

Certification

I certify under penalty of law that this document and all attachments were prepared by me, or under my direction or supervision. The submitted information is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. As specified in Tennessee Code Annotated Section 39-16-702(a)(4), this declaration is made under penalty of perjury.

Authorized Signatory

The current approved signatory for Knoxville, City of and all things related to this grant is **Indya Kincannon**.

If the individual listed above is no longer with the organization, please reach out to TDEC.Grants@tn.gov with the new information.

Please select the correct response below

- ☒ I agree that the above regarding the approved signatory is correct.
- ☐ The above information is not correct. I will send the correct information to TDEC.Grants@tn.gov to get the organization primary contact updated.
- ☐ The above information is correct, but additional signers are needed. I will upload the additional signer information below.

Name of the individual that answered the question above
Makenzie Read

Date the above question was answered
04/11/2025

If the Awarded Local Government will be allowing individuals other than the principal executive officer or ranking elected official (i.e. mayor or utility director) to sign off on contract related items, the below information must be provided for each individual. An Authorization Letter from the principal executive officer or ranking elected official specifying individual(s) listed in the grant proposal have the authority to sign in place of the principal executive officer or ranking elected official must be uploaded below.

Printed Name	Title	Phone	Date Signed	Email	Name of Person Granting Authorization to Certify
--------------	-------	-------	-------------	-------	--

If you have signatory authority from the principal executive officer or ranking elected official, please fill out the information fields above and upload proof of signatory authority on grant applicant letterhead or another form of official executed documentation.

Self Debarment Verification

Please verify that your organization is not on the federal debarment list.

The Awarded Organization is required to check the debarment status of their organization by using the SAMS website prior to making a recommendation of award, purchasing of goods, or securing of services to meet grant requirements and to insure any and/or all funds associated with the grant project will be eligible for reimbursement. Grant reimbursements will not be processed if the debarment status verification have not been completed.

NOTE: If active exclusions and/or delinquent federal debt are shown, the organization cannot receive a grant contract or grant funds. If no active exclusion and no delinquent federal debt are shown, the awarded organization may receive grant funds as long as all other grant policies and procedures are followed.

Search for your organization to confirm that you are not on the Debarment List by going to [System for Award Management \(SAM\)](#)

Click "SEARCH RECORDS" tab.

In the search bars type in the Entity name or using an exclusion search term, Duns & Bradstreet number (DUNS) and/or the Entity Commercial and Government Entity (CAGE) code. You can only use one search bar at a time to search for records. Individuals are not assigned a DUNS number or CAGE code. When checking for a debarred individual, conduct the search by typing the name in the top bar.

Click "SEARCH" to retrieve a list of results. Entities with "Exclusion" listed in purple are currently debarred, while those labeled "Entity" in green do not have exclusions. In the right upper corner of the webpage, use the "Save PDF" option and upload a summary of search results.

Upload Debarment Status Verification

Even if there are no search results, you still must upload a pdf showing your search results.
